

## What different techniques the hackers used to get hold of the youtuber machine.

List of attacks used by the hackers

- social engineering
- phishing campaign
- Business email compromise
- Remote access trojan RAT malware installation using PDF
- Persistent backdoor

## Add your own comments on the matter at the end of your answer.

It's a good to know all these types of attack. I think reducing digital footprint and seeing that hackers mostly look at persons interest and environment and learn from it. These pieces of information tend to be very important for them to create a profile that can be used to hack the person of interest.

## How do you protect yourself against the methods shown in the video?

- Reduce digital footprint if possible
- Personal life should be separated from the online community if there is a possibility.
- A personal security policy
- watching this video and reading the notes I believe that every person should have a security policy in place.
- For example, data backup and retention policy are important.
